

Than Htike Zaw

Frontend Developer

I was an engineering student from MTU. I didn't graduate due to COVID-19 and political issues in my country, so I had to quit in my final year (finished my thesis and about 2 months left till graduate). However, I gained a lot of experience through various projects and internships related to my field, and I have a good understanding of teamwork and soft skills such as communication. I am now working as a full-stack developer, which is something I am passionate about.
